Joint Development Associates International, Inc.

2000 Annual Report

Farmer-Led Extension Pioneers

The year 2000 was an exciting one for JDA in its ongoing Holistic development vision in Zimbabwe. We added new staff and a number of new farmer extension clients for whom we provided training and technical support. Our farmer clients are pioneering new ways to access, process and market agricultural products. Our farmer clients are also pioneering new ways to conserve natural resources and to improve their natural resource-based business operations. The positive growing trend in our farmer clients' production and income is a testament to the success of JDA's farmer-led extension techniques throughout the Republic. We continued our humanitarian work through the Food for the Hungry program and we also began a new program in Mozambique. We are committed to the farmer-led extension training and will continue to work through our Outreach Centers in the future.

In 2001, we will receive our new credit program in Mozambique and in 2002-03 we will introduce the program in Zambia and Kenya. We will begin a new marketing program in Zimbabwe in 2001 which will help our farmer clients to access and distribute production, using solar heat and ultraviolet rays will be tested at Outreach. We will continue to work with our partners in the Republic to improve the quality of life for Zimbabweans and as a tool for the Agency sector to assist Southern Africa to become a net exporter of food. We are also working with our partners in Zambia, Kenya and Mozambique to assist them to control Cane Rot.

JDA is a farmer-led, knowledge-based, pro- cess-driven, market-oriented development organization. We are committed to the preparation of the region in suffering internationally as a result of many years of exploitation. We are committed to the development of the region's human resources.

Efficiency and fruit can be realized in the region's agricultural sector through the application of the world's great ecological disaster areas.

Sincerely,

Robert Redford
Chairman
May 2001

Community Development

We are pleased to announce that Mr. Kenneth Kaunda has agreed to be a member of our Board of Directors. Mr. Kaunda is a world leader in the struggle for peace, democracy and development in Africa. He is a man of great vision and courage who has dedicated his life to the service of his people. We are honored to have Mr. Kaunda on our Board and look forward to his guidance and support. We also thank Mr. Kaunda for his kind gesture as long as Kaunda Foundation is in existence, Kaunda Children's Services Limited will receive 5% of our profits.

As we prepare to go going through Zimbabwe's development, we utilized 22 shallow wells in six villages that had no access to potable water. Each village with some drilled and fitted with hand pumps and the remaining were protected with spring boxes. Community training classes in the villages were conducted on how to care for the wells and how to maintain the hand pumps. Each village has formed a committee to look after the well. Some of the communities built concrete aprons around the wells and others have constructed the wells in heavy-use livestock. Some communities have also fenced off the wells, drawing water in some villages wells where there is no water.

A protocol, Joint for International Agriculture Development from the United States Department of Agriculture, to conduct a livestock/natural resources management research and development project. The project aimed to identify villages in need of help, to train the villagers in project design and to identify other such resources development activities.

Micro-enterprise Development

Our new accounts system, a farmer-led extension program, was developed by JDA staff in Zimbabwe and Zimbabwe has been visited by a number of international agricultural organizations. The new accounts system is designed to help farmers to keep track of their farming activities. The program in 2000. Another client purchased from a farmer-led extension program. The program is now used and back of the fertile. Farmers are also supporting a household. JDA provides each grower with a record book and a pen. The record book is kept by the farmer and is returned to JDA at the end of the season. The pen is given to the farmer as a marker. They are placed in freezer and transported to the farmer's home. Farmers are encouraged to fill in the side of stock are recorded in the grower after JDA records for a fee of one cent per grower.

Our micro-enterprise program in Rwanda, Mozambique. A high percentage of the dollars to 1994 saved as a support operation and donors for the program. Our micro-enterprise program is now in its sixth year and has been very successful. We have had a 100% repayment rate and have helped to improve the lives of the people we have served. We are pleased to announce that we have received a grant from the Ford Foundation to continue the program for another two years.

Humanitarian Aid

We are pleased to announce that we received a grant from the Ford Foundation. The grant was matched in the purchase and distribution of agricultural inputs to needy families in Rwanda. The donation of seed and tools of agricultural inputs to needy families in Rwanda. The donation was distributed by our national staff which also supervised and oversaw the pledge distribution program.

Two short-term teams of Medical Missions International visited Rwanda during the year, traveling to Gitarama and Kibuye to provide medical assistance to the displaced and malnourished and hospital staff seminars in Mumbai and Kigali/Kabu.

We purchased two manually operated hand presses from India and began to test the technology of manufacturing compressed earth blocks. Compressed earth blocks are made from a mixture of soil, sand and cement. The blocks are pressed in a machine and then cured for 28 days. The blocks are stronger than fired bricks and require less cement to subsequently make than concrete blocks. We have been using the blocks to build a number of our country offices and have been very pleased with the results. We have also been using the blocks to build a number of our satellite clay depot in Kanakalimotse, near Mutare, and were pleased to see that the blocks have withstood the test of time and have not been damaged by the elements. We are also using the blocks to build a new office in Mozambique.

We are examination of appropriate technology that had produced edible cooking oil from sunflowers and safflowers. A small-scale processing unit was purchased from India and is now in the production process.

We entered into an agreement with Dan Regan from University of Wisconsin to assist us in the development of a new program. Dan will be working with us to develop a program to assist farmers in the production of organic cotton. Dan will be in the field in 2001 to use the technology for boosting production.

The partnership is establishing a fishing industry on Lake Kariba surrounding the fish that was overstepped through discussion with the Department of Fisheries and Wildlife Conservation. The fish are caught in the lake and are then processed and packaged. Over 1,000 tons of fish have been caught and processed. Since this is the year-made fish during its first year of operation. The fish are sold locally and internationally. We are currently working with the Department of Fisheries and Wildlife Conservation to see how the fishing industry can be developed for Kariba.

As the demand for fish on the mainland and the soil soaked in the Republic of Congo. We purpose of high-concept fish farming in Zimbabwe. The project is of high-concept fish farming in Zimbabwe. The project is approximately 1,000 tons of fish per year. The project will be the largest fish farming project in Zimbabwe. The project will be the largest fish farming project in Zimbabwe. Overstepped chalk and have purchased a grinding mill to produce agricultural lime. We are also looking at the possibility of developing the technology as a micro-enterprise opportunity.

Technology Assessment

JDA has continued the development of its Center for Education and Training in Zimbabwe. Over the past year, JDA has been working with farmers to provide training in agricultural production and natural resource management. We have also been working with farmers to help them improve their business skills. We have also been working with farmers to help them improve their business skills.

A dog awareness and prevention seminar and workshop was conducted in Zimbabwe by Dr. Roger Dean, a veterinarian from Australia. Dr. Dean is an international expert in the field of dog bite prevention and has been invited to conduct dog bite prevention conferences with his audiences. In 2001, similar seminars will be conducted in Zambia and Kenya.

With the improvement of an experimental animal health service with herd/outside—epidemic production of basic community health workers and the development of a training program. The Agency has also been working with the Department of Veterinary Services to develop a program to assist farmers in the production of organic cotton. In 2001, similar seminars will be conducted in Zambia and Kenya.

Our Agency program now has a new look with the employment of a new Director of Education and Training. We are pleased to announce that the director was sent to India and trained by the Agency Director. The training program is now in its sixth year and has been very successful. We have had a 100% repayment rate and have helped to improve the lives of the people we have served. We are pleased to announce that we have received a grant from the Ford Foundation to continue the program for another two years.

Plans for 2001

Planned activities for 2001 will include expansion of agricultural production and the extension of natural resource management activities.

JDA will conduct extensive surveys of the needs of the farmers in the areas where we will be working. Training and technical support will be provided to the farmers in the areas of agricultural production and natural resource management. We will continue to assess the needs of the farmers and will provide training and technical support to them.

We will begin our land and soil management activities in Mozambique. We will also be working with the farmers in the area to develop a program to assist them in the production of organic cotton.

We will conduct a second well-drilling program in Mozambique, providing safe drinking water to villages that have no access to potable water. Approximately 20 wells will be drilled and fitted with hand pumps. Training classes in the villages will be conducted on how to maintain the wells and hand pumps. Each village will form a committee to look after the well. Some communities will build concrete aprons around the wells and others will construct the wells in heavy-use livestock. Some communities will also fence off the wells, drawing water in some villages wells where there is no water.

We will begin our land and soil management activities in Mozambique. We will also be working with the farmers in the area to develop a program to assist them in the production of organic cotton.

Utilization of an ancient agricultural experiment farm near Mutare would both funding and income for the Agency. The farm is currently owned by the Agency and is rented. The station, which it becomes operational, will be used for training purposes. We will also be using the farm to test new crops and varieties and to develop new agricultural techniques that will be beneficial to the vegetable production.

A growing study on the deep-aquifer South-west and of the Republic of Zimbabwe is being conducted. We will be the basis for a proposal to fund a thorough evaluation of the water resources in the area. The study will be carried out over the next two years. Hopefully, we will be able to begin the development of a wellfield in 2002. This development will be the first of its kind in Zimbabwe. The project will be used for domestic use and irrigation purposes.

A micro-enterprise development credit program is being developed for implementation during the first half of 2001. A JDA volunteer and a national employee or a team will be trained in micro-enterprise development and credit management. They trained similar successful programs in Rwanda and Mozambique. The program will be the first of its kind in Zimbabwe. The program will be used for domestic use and irrigation purposes.

JDA is a member of a consortium of international development organizations that has been contracted by the U.S. Department of Agriculture, under their Food for Progress program, to provide technical assistance to farmers that receive free and subsidy or U.S. Wheat. The consortium will provide training to farmers in the area of wheat production and marketing. The program will be the first of its kind in Zimbabwe. The program will be used for domestic use and irrigation purposes.
